

# Product Modeling using BuyDesign Configurator Studio

---

The BuyDesign Configurator Studio is a tool for creating and maintaining your product models, including: sales, pricing and manufacturing rules. To fully realize the power and versatility of this product, TDCI offers this course in basic rules development and use of the Configurator Studio.

## Purpose

This course teaches you to:

- Attain a medium-level understanding of the BuyDesign Configurator
- Acquire the basics of creating rulesets
- Read, write and comprehend the basic syntax for the Configurator
- Use the four different types of configuration, with a focus on Interactive Configuration
- Create and effectively use option lists, matrices, local and global variables and display images

## Audience

Rules developers

## Prerequisites

Prior to joining this class, TDCI recommends a basic understanding of Configure-To-Order Manufacturing and Guided Selling, knowledge of your company's product offering and the ability to use Microsoft SQL Enterprise Manager.

## Details

The course is three days, Instructor-led, and offered at TDCI or at a customer-provided training site. Training is specific to the current released version of BuyDesign.

## Topics

This course uses nine hands-on exercises within the following topics:

- Basic Rules and Rules Development
- Expressions
- Options Lists
- Matrices
- Advanced Rules
- Configuration Codes
- Manufacturing Rules
